

XAUUSD Confluence EA — Quick Start

MQL5 Expert Advisor for MetaTrader 5 · Multi-indicator confluence strategy for Gold (XAUUSD)

Install

- 1 MT5 → **File** → **Open Data Folder** → copy XAUUSD_Confluence_EA.mq5 into MQL5\Experts\.
- 2 Open it in **MetaEditor** (F4) and press **F7** to compile → confirm "0 errors".

Enable & Attach

- 1 Click the **AlgoTrading** toolbar button ON (Tools → Options → Expert Advisors → allow algo trading).
- 2 Open a chart for your broker's Gold symbol (XAUUSD / XAUUSDm / GOLD).
- 3 Navigator (Ctrl+N) → Expert Advisors → drag **XAUUSD_Confluence_EA** onto the chart.

Load the Preset (.set file)

- 1 In the EA dialog's **Inputs** tab, click **Load** and select XAUUSD_Confluence_EA_Default.set.
- 2 Check "Allow Algo Trading" on the **Common** tab, then click **OK**. A smiley face on the chart = EA running.
- 3 If the timeframe inputs (Working/Trend) don't load from the preset, set them manually: Working = **M15**, Trend = **H4**.

Test Before Trading Real Money

- 1 **Strategy Tester** (Ctrl+R): XAUUSD, "Every tick based on real ticks", multi-year range → check equity curve & drawdown.
- 2 **Demo account**: run live on demo for several weeks to confirm real fills/spread match the backtest.
- 3 **Live**: start with low risk % (see table) and monitor around major news (NFP, FOMC, CPI) — no news filter is built in.

What It Does / Key Inputs

Entry: H4 EMA200 sets trend bias → M15 EMA20/50 crossover triggers → confirmed by MACD momentum, RSI (not overbought/oversold), ADX/DMI (real trend, not chop), and price not already extended past the Bollinger Band.
Exit/Risk: ATR-based stop-loss & take-profit, % equity position sizing, breakeven move + ATR trailing stop, daily loss circuit breaker, session/spread/weekend filters.

Input	Default	Meaning
InpRiskPercent	1.0	% equity risked per trade
InpAtrSlMultiplier	1.8	Stop-loss = ATR × this
InpRiskRewardRatio	1.8	Take-profit = SL dist. × this
InpMaxDailyLossPct	3.0	Halt new trades for the day
InpMaxTradesPerDay	6	Entry cap per day
InpAdxMinLevel	22.0	Min. trend strength to trade
InpMaxSpreadPoints	350	Skip entries above this spread
InpUseSessionFilter	true	07:00–20:00 server time window

■ **No trading system guarantees profit.** Gold is volatile and news-sensitive. Backtest across multiple market regimes, forward-test on a demo account, and only risk capital you can afford to lose. Verify your broker's XAUUSD contract specs (tick value/size, stops level, filling mode) before going live. This EA has no economic-calendar news filter.
