

XAUUSD Confluence EA — Quick Start

MQL5 Expert Advisor for MetaTrader 5 · 2-of-3 confluence strategy for Gold (XAUUSD)

Install

- 1 MT5 → **File** → **Open Data Folder** → copy XAUUSD_Confluence_EA.mq5 into MQL5\Experts\.
- 2 Open it in **MetaEditor** (F4) and press **F7** to compile → confirm "0 errors".

Enable & Attach

- 1 Click the **AlgoTrading** toolbar button ON (Tools → Options → Expert Advisors → allow algo trading).
- 2 Open a chart for your broker's Gold symbol (XAUUSD / XAUUSDm / GOLD).
- 3 Navigator (Ctrl+N) → Expert Advisors → drag **XAUUSD_Confluence_EA** onto the chart.

Load the Preset (.set file)

- 1 In the EA dialog's **Inputs** tab, click **Load** and select XAUUSD_Confluence_EA_Default.set.
- 2 Check "Allow Algo Trading" on the **Common** tab, then click **OK**. A smiley face on the chart = EA running.
- 3 If the timeframe inputs (Working/Trend) don't load from the preset, set them manually: Working = **M15**, Trend = **H4**.

Test Before Trading Real Money

- 1 **Strategy Tester** (Ctrl+R): XAUUSD, "Every tick based on real ticks", multi-year range → check equity curve & drawdown.
- 2 **Demo account**: run live on demo for several weeks to confirm real fills/spread match the backtest.
- 3 **Live**: start with low risk % (see table) and monitor around major news (NFP, FOMC, CPI) — no news filter is built in.

What It Does / Key Inputs

Entry — 2 of 3 confluences, at least 1 confirmed:

- 1 **Trend** H4 EMA200 bias + M15 EMA20/50 aligned with a recent cross (confirmed: EMAs separated $\geq 0.25 \times \text{ATR}$).
- 2 **Momentum** MACD side + turn, RSI past 50 but not extreme (confirmed: histogram expanding + RSI 5 past 50).
- 3 **Strength** ADX ≥ 22 , +DI/-DI aligned (confirmed: ADX ≥ 28 , DI gap ≥ 8).

Bollinger acts as a *veto*, not a vote. At 2/3 the trend leg is optional, so counter-trend entries are possible — set InpRequireTrendConfluence to block them.

Exit/Risk: ATR stop-loss & take-profit, % equity sizing, breakeven + ATR trailing stop, daily-loss circuit breaker, session/spread/weekend filters.

Input	Default	Meaning
InpMinConfluences	2	Confluences needed to enter
InpRequireConfirm	true	Need a confirmed confluence
InpMinConfirmed	1	How many must be confirmed
InpRequireTrendConfluence	false	Block counter-trend entries
InpRiskPercent	1.0	% equity risked per trade
InpAtrSlMultiplier	1.8	Stop-loss = ATR $\times$ this
InpRiskRewardRatio	1.8	Take-profit = SL dist. $\times$ this
InpMaxDailyLossPct	3.0	Halt new trades for the day
InpMaxTradesPerDay	6	Entry cap per day (see note)
InpMaxSpreadPoints	350	Skip entries above this spread

■ **No trading system guarantees profit.** Gold is volatile and news-sensitive. Backtest across multiple market regimes, forward-test on a demo account, and only risk capital you can afford to lose. Verify your broker's XAUUSD contract specs (tick value/size, stops level, filling mode) before going live. This EA has no economic-calendar news filter. At 2 of 3 confluences it signals far more often than at 3 of 3 — roughly 6x in testing — so InpMaxTradesPerDay becomes the binding limit on busy days.
